

Submersible Sewage Pump Range

Centrifugal

Issue No: 04 October 2018

1985 - 1990

The first Faggiolati catalogue/price list came out in 1985, with pumps from 0.50 HP to 7.5 HP. 1988 saw the completion of the first range of submersible electric pumps up to 30kW, with motor body equipped with cooling "wings"

1999 - 2002

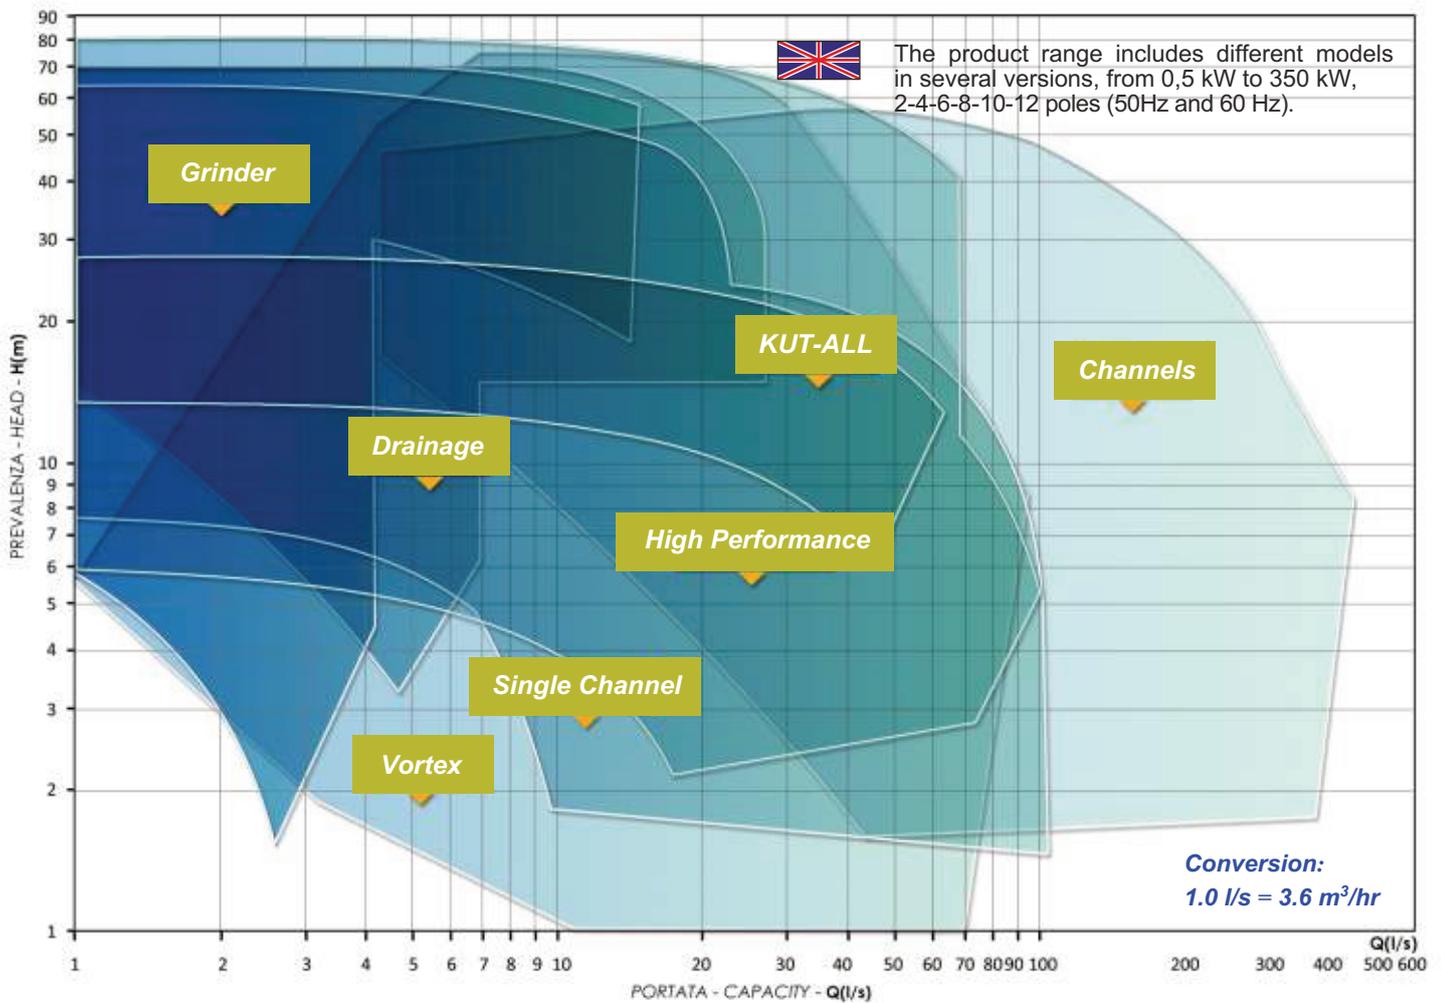

Since 1999, we have been developing the "second generation" of electric pumps with innovative construction able to guarantee maximum interchangeability of optimised components, functionally and technologically speaking. The new bodies are equipped with exclusive "pyramids" which, by now, characterise the design of Faggiolati machines.

2013 - 2015

Towards the end of the 2000s, Faggiolati began designing a "third generation" of submersible electric pumps equipped with hydraulics able to combine high performance and low risk of clogging. The new generation of Faggiolati machines is based on the "solve & save" philosophy, a double advantage for every application.

Distribute By EST MECH PTE LTD, SINGAPORE
